

On-line Presentation\ Webinar

presents **SIDEis One**

22. 02. 2024

10:30 - 11:30

SIDEis is a compact and intelligent LED design, made for busy roadways, conflict zones and tunnel lighting.

It provides clean, even light distribution across road surfaces for optimal driver visibility while eliminating wasted light.

Unlike vertically-mounted lighting sources on traditional poles, SIDEis distributes light **LATERALLY** – across a road surface.

This avoids glare for drivers and eliminates wasted energy on illuminating large areas outside the road surface.

ROADWAY LIGHTING... REDESIGNED
