## **AVILA** Unpretentious and puristic!

The AVILA: An expressive design luminaire for the holistic design of urban spaces.

Clear and minimalist in design – and nevertheless expressive – the AVILA fits harmoniously into almost any architectural environment.

*In yours as well?*

**AVILA**  
Designed entirely to your requirements!

Design your AVILA – whichever way you want:  
whether with customised decorative foil, whether  
with designer rings or with effect lighting.

*What are your requirements?*

Height total: 4800 mm / LSH 4700mm

The image shows a concrete wall with four different AVILA lighting fixture configurations. 1. A wall-mounted fixture with a horizontal arm and a cylindrical glass shade. 2. A wall-mounted fixture with a vertical arm and a cylindrical glass shade. 3. A catenary suspended fixture with a cylindrical glass shade hanging from a thin wire. 4. A pole-mounted fixture with a tall, thin black pole and a cylindrical glass shade at the top. A blurred figure of a person is walking in the background, and the floor is a dark, textured surface.

**AVILA**  
**Holistic nature is its strength!**

The AVILA: A luminaire that is created like no other for holistic lighting concepts in urban space.

As a pole top mounted, catenary suspended or wall mounted luminaire – it is able to meet any need, during the day and at night.

*You have the choice!*

## AVILA Design and technology!

The AVILA offers functionality and efficiency: The most modern LED technology, a variety of optics as well as innovative dimming systems ensure you are equipped to meet practically all lighting requirements.

Equipped with state-of-the-art and extremely powerful LEVO<sub>3</sub> technology with a maximum rated input power of 53 watts, it offers a variety of lighting characteristics from asymmetric to asymmetric wide, deep or right illumination clear through to rotationally symmetrical – and thus has an especially wide range of applications, even at heights of up to 6 meters.

With the use of dimming systems, the AVILA is even more efficient and convenient. Again, the choice is yours: whether DALI, StepDIM or AstroDIM.

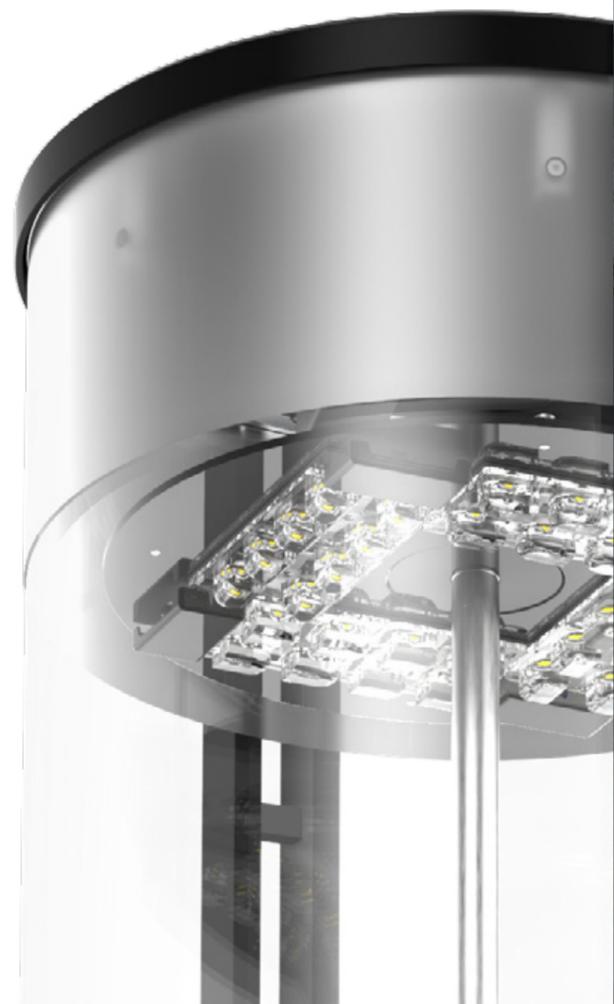

The AVILA – the perfect combination of design and technology!

*Don't you agree?*

LEVO<sub>3</sub> (Module and optics)
