

IWASAKI

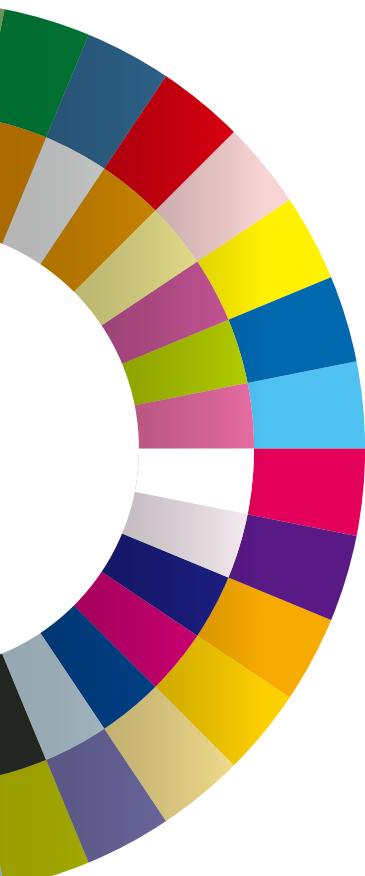

EYE CERA ARC™

Ceramic Metal Halide lamp for energy saving.

Real colours are pursued

Real colours are pursued

Quality Light Truer Colour

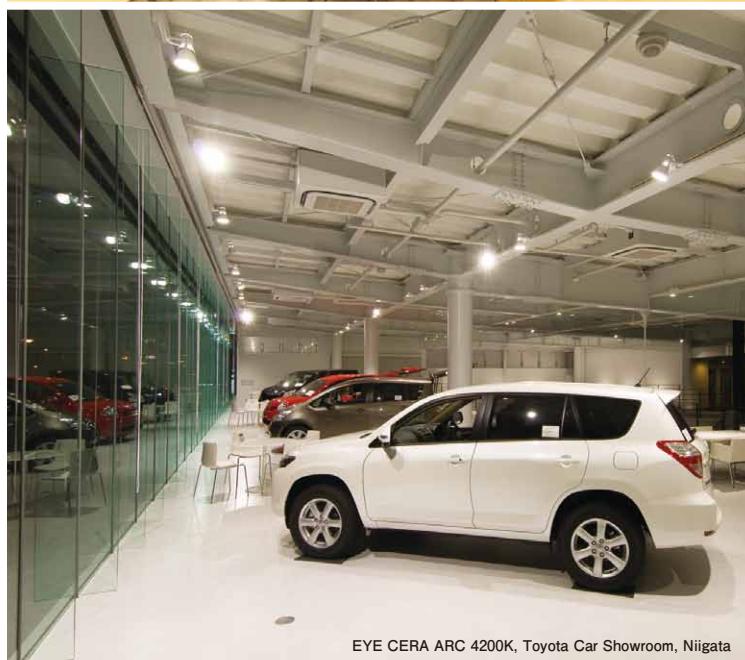

A premium-feel lighting display requires a premium quality light source.

With exceptional colour rendering – including faithful reproduction of reds – and available in a broad range of colour temperatures, the EYE CERA ARC range of lamps can be used to enhance a broad spectrum of products and spaces by illuminating them in their true colours.

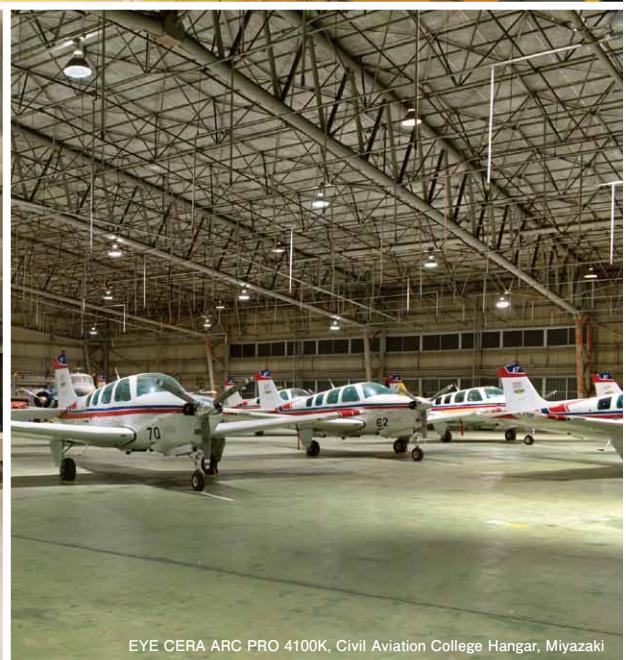

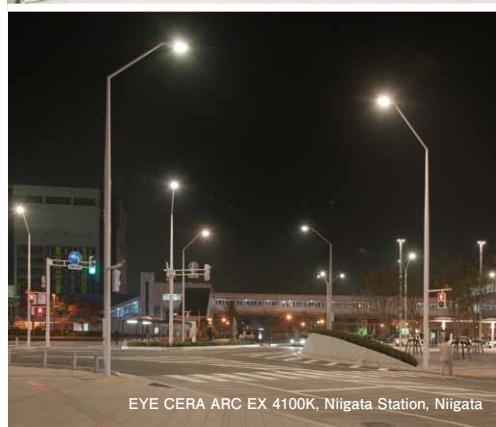

EYE CERA ARC 3500K, Meal Muji Café, Kanagawa

EYE CERA ARC 4200K, Toyota Car Showroom, Niigata

EYE CERA ARC PRO 4100K, Civil Aviation College Hangar, Miyazaki

EYE CERA ARC EX 4100K, Niigata Station, Niigata

REAL RED

01

Real colour-Refined Red

■ In pursuit of real light

The Colour Rendering Index (CRI) is the scale on which the faithfulness of colour reproduction is measured, with a maximum rating of Ra100.

In general terms, lamps producing a CRI rating of Ra80 or above will be categorized as “High Colour Rendering Lamps”. However, the benchmark for EYE CERA ARC lamps is set higher, with CRI ratings of over Ra90 across the broad spectrum of colour temperatures in the range.

A broad spectrum of colour temperatures coupled with exceptional colour rendering make the EYE CERA ARC lamps the ideal tool to enhance a broad spectrum of products and spaces by illuminating them their true colours.

○ Colour Rendering of lamps and recommended usages; International Commission on Illumination (CIE), 1986

Colour Rendering Group	Colour Rendering	Application(s)		Recommended Lamp
		Recommended	Acceptable	
1A	Ra \geq 90	Colour Comparison; Product Inspection; Clinical examination; Gallery		EYE CERA ARC, COLOR ARC
1B	90 > Ra \geq 80	Residential / Hotel / Restaurant / Retail / Office / School / Hospital		EYE CERA ARC EX/PRO
		Printing / Publishing / Precision Task		
2	80 > Ra \geq 60	General Task	Office / School	EYE Multi Super-Ace
3	60 > Ra \geq 40	Tunnel / Road / Non-Precision Task	Non-Precision Task	EYE Multi Hi-Ace
4	40 > Ra \geq 20	Road / Tunnel	Workplaces where colour rendering is not important.	EYE Sunlux Ace

■ Comfortably Sophisticated -2800K-

A warm colour temperature of 2800K, combined with exceptional colour rendering and clear reproduction of colours in the red spectrum-often a weak point for low wattage metal halides-allows for the creation of an elegant yet comfortable environment.

Providing a warm halogen-like light through a light source offering far superior efficiency and lamp life, the lamps allow for a reduction in the number of installed units, a reduction in energy consumption, and a reduction in maintenance costs, without a reduction in the quality of the lighting environment.

Real colours are pursued

Brilliant Red

Ceramic arc tubes are able to withstand higher temperatures in comparison to those of quartz metal halides, which allow the optimally balanced compounds within the arc tubes of EYE CERA ARC lamps to be burned with greater intensity.

As a result the rendering of colours in the red spectrum – often a weakness within low wattage metal halides – is greatly elevated, making the lamps ideal for applications where the enhancement of reds is desired; retail lighting being a prime example.

Brilliant across all Colours

The image on the left shows a set of billiard balls illuminated under a standard metal halide lamp, and in this image the difference between the blue ball and the purple one is not as clear as in the image on the right, which shows the same balls under a EYE CERA ARC lamp.

Standard metal halide lamp

The illumination of greens is strong and that of reds is relatively weak, meaning reds are not shown clearly or brightly.

EYE CERA ARC

An equal balance between red, green and blue, ensures all colours appear brighter and clearer.

Pinnacle of Red -Natural Red-

The Natural Red lamp offers superior chromacity thanks to a mixture of chemicals unique to Iwasaki, with a high colour rendering of over Ra90 and exceptional red colour rendering of over R9:90.

As a result of this, the Natural Red lamp accentuates reds in a more refined and unexaggerated manner than neodymium or high-pressure sodium lamps, making the reds appear more naturally and vividly.

Combining both exceptional red colour rendering and overall colour rendering of over Ra90, the Natural Red lamp accentuates reds in a more natural and vivid way than neodymium or high-pressure sodium lamps had done previously.

A more natural reproduction of reds:

Under neodymium or high-pressure sodium lamps, reds are exaggerated as a result of blue and green colours being suppressed, leading to a less balanced red reproduction. However, under the natural red lamp, the high colour rendering ensures that all colours – as well as red – are projected clearly.

Neodymium lamp

Red colours are exaggerated, giving a reddish tint to all illuminated subjects.

EYE CERA ARC (Natural Red)

Reds are drawn out whilst also maintaining a balance with green and blue, meaning that all colours are projected more faithfully.

NATURAL

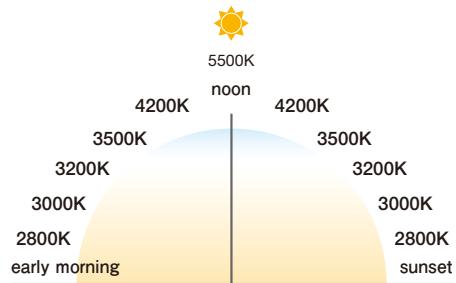

02

Natural Lighting

Nature Reproduced

Through a broad spectrum of colour temperatures ranging from 2500K to 5500K, the EYE CERA ARC range provides a varied selection of light sources with which to create a vibrant and natural lighting environment.

With this variety comes the flexibility to adjust displays to suit changes in seasons or products through a simple lamp change.

Abundant Variety

2500K

A welcoming, the calm of the late afternoon sun

2800K

A soft, calming environment

3000K

A relaxing, comfortable environment

3200K

A twilight - like environment of tranquility

3500K

A fresh, elegant environment

4100-4300K

An energetic, natural environment

5500K

A fresh, vibrant environment, resembling the clear midday sun

3600K (Natural Red)

Accentuates and maximizes the true beauty of red

ECOLOGY

03

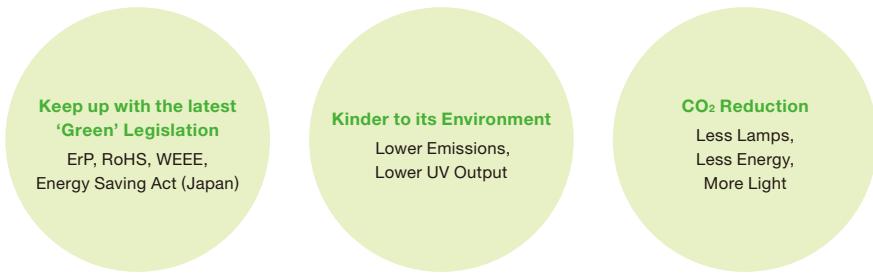

Eco & Safety Lighting

Greener Lighting Solutions

Faced with the issue of Global Warming, 'Energy-Saving' and 'CO₂ Reduction' have become core requirements in many areas of everyday life. In this drive towards a low-carbon society, consumers are all being encouraged to consider the environmental impact of their purchasing behaviour - a movement that we at Iwasaki refer to as ECO Choice.

Through the promotion of energy efficient and environmentally conscious product development, we aim to provide ever more products that satisfy the ECO Choice requirements of customers.

UV-Reduction

The UV-cut coating on the outer bulb reduces UV output by 90%, thus suppressing damage resulting from UV output.

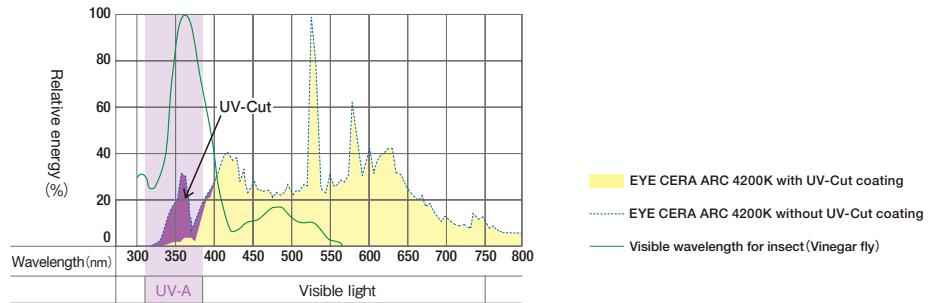

UV-Cut Coating

Any light source that emits ultraviolet rays – even at minimal levels – will present the probability of discolouration of the illuminated subject.

How much so will depend upon the level of rays emitted, as well as length of time the subject is illuminated, and its distance from the light source.

EYE CERA ARC lamps significantly suppress the rate of discolouration by vastly reducing the amount of UV-A emitted.

UV-Cut Characteristics

EYE CERA ARC 2500K

Creating a warm atmosphere

The calm of the late afternoon sun, bringing with its images of a relaxing and pleasant evening ahead - this is the ambiance created by the EYE CERA ARC 2500K.

Its warm, welcoming light makes the EYE CERA ARC 2500K lamp perfect for applications and settings that require a softer light with a premium accent - such as hotel lobbies, or commercial and retail applications.

* Lamps marked ECG in the Ref. column must be used with electronic ballasts manufactured by or approved by Iwasaki Electric to ensure correct operation.

FEATURES

- Fits in existing EYE SDX (white sodium lamp) luminaires.
- Warm accent created by ceramic technology is virtually identical to incandescent lighting with pure colour Ra93.
- At 20000hrs, EYE CERA ARC 2500K offers more than tripled the average life time of existing EYE SDX (white sodium lamp) 70W installations, leading to savings on maintenance costs, reductions in waste, and reduced environmental impact.
- UV reduction coating on outer bulb prevents lit objects from fading and maintains high output with polycarbonate lenses.
- Beam angle (°) and Max. light intensity (cd) for PAR36 type

EYE CERA ARC Natural Red

Accentuates refined reds

Ceramic metal halide lamp with a high red colour rendering.

The colour of many items including meat, fish, vegetables and fruit can be affected by the accuracy of the rendering of the colour red.

EYE CERA ARC "Natural Red" brings out the true beauty and richness of red and other colours.

FEATURES

- Excellent rendition and resolution of red colours.
- R9: ≥90 is one of the highest colour rendering ratings of red in any metal halide or ceramic metal halide lamp.
- Ideal for more than just red - this lamp renders other colours including greens, blues and whites with greater accuracy.
- UV reduction coating on outer bulb prevents lit objects from fading and maintains high output with polycarbonate lenses.

EYE TWIN CERA ARC

— Double ARC tube Ceramic Metal Halide Lamp —

Extra long lamp life achieved through twin arc tube design

An exceptional rated lamp life of 50000hrs is achieved through incorporating 2 ceramic metal halide arc tubes into one lamp. At 110lm/W (230W version), the level of efficiency provided by the EYE TWIN CERA ARC places it on a par with LED lighting.

Thanks to the resulting reductions in consumption, CO₂ emissions, and maintenance costs, the EYE TWIN CERA ARC is both a cost- and environmentally- sound lamp.

PHYSICAL DATA AND CHARACTERISTICS

Type	Watts (W)	Bulb	Base	Bulb Finish	Std. Pkg. Qty.	Colour Temp. (K)	Lamp		Initial Lumens (lm)	Ra	Rated Av. Life (hrs)	Burning Position	Fig. No.	Ref.*
EYE TWIN CERA ARC

Lamps marked "1" in the Ref. column should be operated on a HPS ballast with ignitor (3.5-5.0kV pulse height is required).

Lamps marked "2" in the Ref. column should be operated on a reactor type ballast for MVL with ignitor (3.5-5.0kV pulse height is required).

FEATURES

- Industry-leading lamp life of 50000hrs.
- Over 40% reduction in energy consumption, brightness equal to a 400W metal halide lamp, achieved with only 230W.
- 1/3 re-strike time compared with EYE CERA ARC ACE PRO. Suitable for installations which are switched on/off frequently.
- UV-Cut coating reduces the number of insects attracted towards the light.
- Ideal for hard-to-reach installations such as parks, industrial and sports facilities.
- Short start-up time of 5 minutes - ideal for applications involving frequent switching.
- Shrouded arc tube design ensures the lamps are safe for use in open fixtures.

APPLICATIONS

- Parks and public spaces
- Warehouses / Factories / Sports Halls

Lamps marked "1" in the Ref. column should be operated on a HPSL ballast with ignitor.

Lamps marked "2" in the Ref. column should be operated on a HPSL ballast without ignitor.

Lamps marked "3" in the Ref. column should be operated on a reactor type ballast for MVL with ignitor.

Lamps marked "4" in the Ref. column should be operated on a reactor type ballast for MVL without ignitor.

EYE CERA ARC EX offers numerous advantages in comparison to the low colour rendering 'orange' light produced by conventional High Pressure Sodium (HPS) lamps.

As white light improves the visibility of objects to the human eye, the same -or better- levels of visibility can be achieved with a higher lumen output.

FEATURES

- Outstanding luminous efficacy : Up to 132lm/W
- Reliable long life : Up to 24000hrs at 80/70% lumen maintenance
- High colour rendering : Ra80/75
- Cleaner white light : 3500K

APPLICATIONS

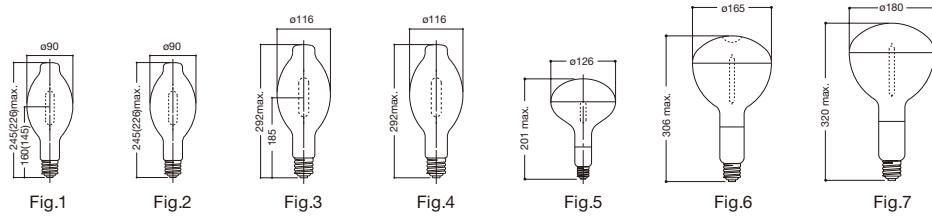

- Road lighting, street lighting, residential, historical, retail, any applications that currently use HPSL or MVL.

Niigata Station South Gate, Niigata

EYE CERA ARC PRO offers reduction of the number of lamps -and the Carbon Footprint- of existing Mercury Vapour Lamp (MVL) or Metal Halide Lamp (MHL) installations in large spaces such as warehouses and sports facilities, without reducing the brightness.

FEATURES

- Outstanding luminous efficacy : Up to 125 lm/W
- Reliable long life : Up to 24000hrs at 75% lumen maintenance
- High colour rendering : Ra80/70
- White light : 4100K
- Protected from the inside (shrouded)

APPLICATIONS

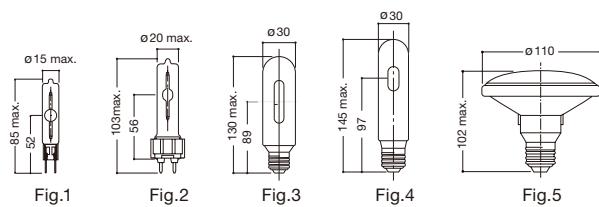

- Road lighting, street lighting, residential, historical, retail, any applications that currently use HPSL or MVL.
- High bay applications of sports facilities (gymnastic halls), warehouses, industrial plants, large scale commercial facilities, any applications that currently use MVL/MHL.

* Lamps marked ECG in the Ref. column must be used with electronic ballasts manufactured by or approved by Iwasaki Electric to ensure correct operation.

Superior colour rendering, 2800K warm incandescent colour with ceramic metal halide lamp efficacy.

FEATURES

- Ra95 - the highest colour rendering in warm colour HID lamps.
- 1.7 times higher than output than high CRI white sodium lamp. (Comparison of EYE SDX: 2500K, Ra85 white sodium lamp)
- 3 to 5 times more efficient and up to 5 times longer life than halogen or incandescent lamps.
- R9: up to 60, high red colour rendering.
- UV reduction coating on outer bulb prevents lit objects from fading and maintains high output with polycarbonate lenses.

Press Pivot, Hokkaido

* Lamps marked ECG in the Ref. column must be used with electronic ballasts manufactured by or approved by Iwasaki Electric to ensure correct operation.

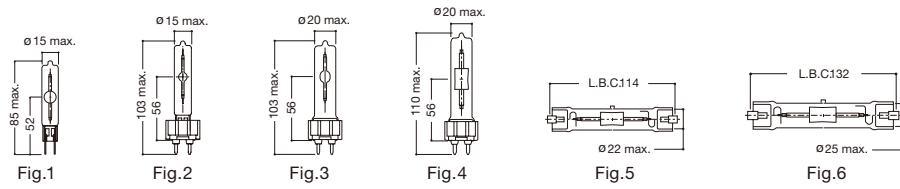

FEATURES

- Ra: 95, high colour rendering.
- Provides approx. 13% higher lumens than other high colour temperature CRI metal halide lamps.
- R9: ≥70, high red colour rendering.
- UV reduction coating on outer bulb prevents lit objects from fading and maintains high output with polycarbonate lenses.

* Lamps marked ECG in the Ref. column must be used with electronic ballasts manufactured by or approved by Iwasaki Electric to ensure correct operation.

High colour rendering ceramic metal halide lamp.

The colour rendering index (Ra) is a measure of how accurately an artificial light source can render colour.

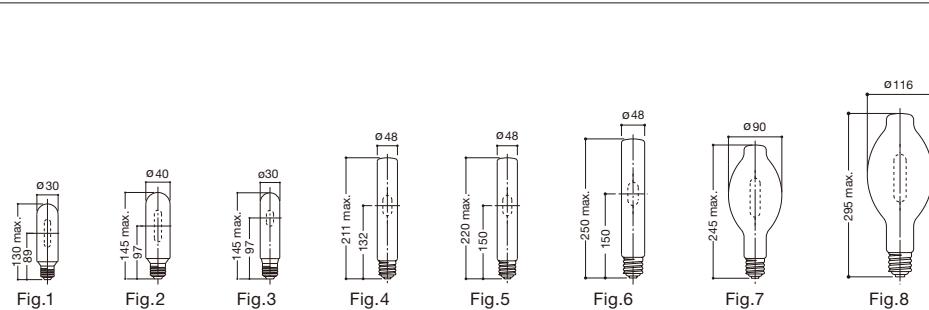

FEATURES

- Most of the EYE CERA ARC models including warm 3000K range colour temperature types have Ra≥90, the highest level of colour rendering index.
- UV reduction coating on outer bulb prevents lit objects from fading and maintains high output with polycarbonate lenses.

Alpha Big Bike Mall, Niigata

* Lamps marked ECG in the Ref. column must be used with electronic ballasts manufactured by or approved by Iwasaki Electric to ensure correct operation.

Screw base, high colour rendering ceramic metal halide lamp.

TP: Tubular "Protected" bulb with E27 type fits a wide variety of applications such as façade lighting, wall wash lighting.

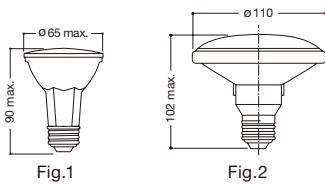

The protected lamps can be used without glass cover.

FEATURES

- Clear and frosted bulbs are available.
- UV reduction coating on outer bulb prevents lit objects from fading and maintains high output with polycarbonate lenses.

* Lamps marked ECG in the Ref. column must be used with electronic ballasts manufactured by or approved by Iwasaki Electric to ensure correct operation.

PAR type bulb with E27 screw base ceramic metal halide lamp.
Various wattages and colour temperature types are available in PAR range.

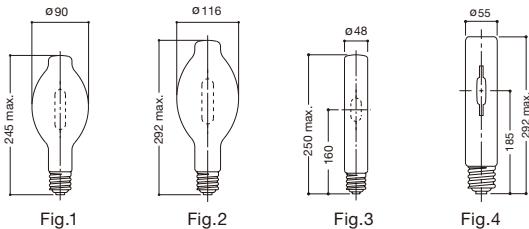

FEATURES

- Wide and spot beam types available.
- "Pink" type uses dichroic mirror instead of aluminium coated mirror to produce translucent pinkish colour ideal for food lighting and display lighting applications. Please find details of other available PAR36 colours on the 2500K, 2800K and Natural Red pages.

Lamps marked "1" in the Ref. column should be operated on a reactor type ballast for MVL with ignitor.
Lamps marked "2" in the Ref. column should be operated on a reactor type ballast for MVL without ignitor.

Ceramic metal halide lamp for use with a reactor type ballast.
Direct replacement for standard metal halide lamps or high pressure mercury lamps.

FEATURES

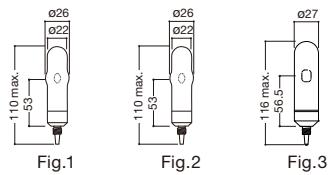

- Saves 5 to 10% system wattage consumption per socket.
- High efficacy and highly maintained lumens support energy saving by reducing the number of luminaires required to achieve design lumens.
- Ra80-85, high colour rendering makes installations more productive and attractive with reduced colour shift and imperceptible lamp to lamp colour variation.
- Shrouded "Protected" design makes it possible to use in luminaires without glass front providing with low cost, high performance luminaires.
- UV reduction coating on outer bulb prevents lit objects from fading and maintains high output with polycarbonate lenses.

* Use with dedicated electronic ballasts.

** "Natural Red" type

Note : This series are complied with Japanese standard only.

Special EU10 base type Compact ceramic metal halide lamp.
Triplicity jacket structure for open fixture.

FEATURES

- Long life & high efficacy
- 15000hrs for 70W, 18000hrs for 90W, reduced maintenance cost
- Extremely high efficiency of up to 122lm/W (90W)
- Extremely high "Class 1A" colour rendering

APPLICATIONS

- Base lighting of fresh produce / spot lighting / accent lighting / Signage / billboards.

RUGGEDWORKS, Kanagawa

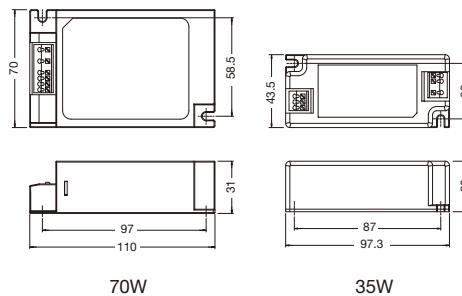

EYE electronic ballast for EYE CERA ARC 70W/35W

70W

35W

70W

35W

Iwasaki range of electronic HID ballasts are designed to allow optimal performance of our CERA ARC lamps, offering reduced power consumption, regulated power through life, simplified circuitry and more stable lamp operation compared to conventional magnetic ballasts system.

ADVANTAGES

- Good regulation against supply voltage variation
- Improved lamp colour consistency
- Elimination of lamp flicker
- Reduced weight of control gear
- Reduced electrical power losses
- Ballast noise reduced/eliminated
- Single piece compact unit
- Reduced wiring complexity in the luminaire
- Automatic lamp failure shut-down

SAFETY

- EN61347-1 EN61347-2-12
- RoHS compliant (Reduction in Hazardous Substances)

APPLICATIONS

- Minimum starting temperature:-20°C
- Maximum ambient temperature:55°C (integral)
- Maximum case temperature:85°C

Nominal Lamp Wattage (W)	Rated Lamp Wattage (W)	Product Code	Input Voltage (V)	Input Wattage (W)	Input Current (A)	Input Power Factor

↑ Looking in the direction of Tobu Railway Hikifune Station. Simple and modern sidewalk lamps, which incorporate elements of design that can be found in the buildings, are installed.

← The soft light from the sidewalk lamps illuminates the new streets and creates a sense of rhythm.

Installed Lamps / EYE CERA ARC 3200K/150W-13, EYE CERA ARC T 3000K/35W-5, FEC CERA ARC ACE 3000K/150W-5

Class 1 Urban District Redevelopment Project in the Area in Front of Hikifune Station / Sumida Ward, Tokyo Metropolitan Prefecture

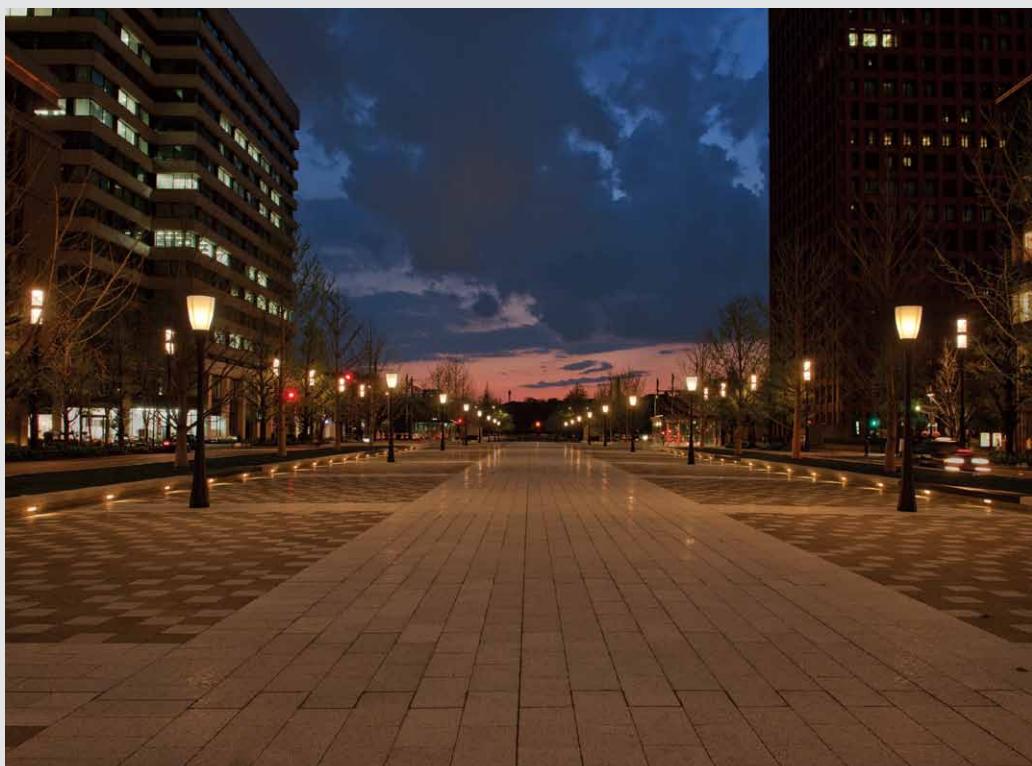

Gently illuminating the newly refurbished streets with pleasant lighting

↑ Looking towards Tokyo Station. Walkway lights are installed along the plaza-like walkway/carrigeway.

→ Gyoko Dori during the evening, extending in a straight line from Tokyo Station to the Imperial Palace. This symbolic road is bathed in a gentle warm light.

Installed Lamps / EYE CERA ARC 2800K/150W-64, EYE SDX 2500K/100W -18

Gyoko Dori / Chiyoda Ward, Tokyo Metropolitan Prefecture

Lighting befitting the status of a symbolic road of Japan

↑ In Parts Building A, fixtures for high ceilings and FEC CERA ARC ACE are combined to create a pleasant lighting environment that is also energy-saving.

← In Train Carriage Building C, light from FEC CERA ARC ACE lamps installed in the high ceiling brightly and evenly illuminates the space and creates a pleasant working environment.

Installed Lamps / EYE CERA ARC ACE 360W-405, EYE CERA ARC ACE 270W-190, EYE CERA ARC ACE 230W-60, Fluorescent Lamp 32W-156

East Japan Railway Company's Omiya General Rolling Stock Center / Saitama City, Saitama Prefecture

Light from FEC CERA ARC ACE pleasantly illuminates this large rolling stock center and contributes to saving energy and reducing CO₂ emissions

↑ L-CUBE spotlights (EYE CERA ARC 4200K/70W) are installed in the meat and fish section to create a high quality visual environment. The interior is accentuated by varying the color temperature, such as by the use of EYE CERA ARC 3000K to illuminate the walls.

→ Vegetables and fruits section. Light from EYE CERA ARC 4200K/70W with good color rendering properties brings out the natural colors of the produce. Illuminate the walls.

Installed Lamps / EYE CERA ARC TC 3500K/70W-19, EYE CERA ARC TC 3500K/35W-6, EYE CERA ARC TC 4200K/70W-66, EYE CERA ARC 4200K/35W-11

Cupid Minami Shichiku / Niigata City, Niigata Prefecture

A plan to create pleasant lighting for a supermarket provides both a quality environment and energy-savings
